

Tree traversals

Today's announcements:

- ▶ MT1 Feb 4, 7-9:00p WOOD 2
- ▶ HW2 out, due Feb 5, 11:59p

Today's Plan

- ▶ Trees and their traversals

Warm up: What is the number of nodes $N(h)$ in a perfect binary tree of height h ?

$$\begin{aligned} N(h) &= \sum_{i=0}^h 2^i \\ &= 2^{h+1} - 1 \\ N(h) &= 2N(h-1) + 1 \end{aligned}$$

$$N(0) = 1$$

Ordered Binary Trees

An ordered binary tree is

- ▶ empty (\emptyset), or
- ▶ root node with left and right ordered binary subtrees

Given height h binary tree,

- ▶ max # nodes = $2^{h+1} - 1$
- ▶ max # leaves = 2^h
- ▶ max # empty slots = 2^{h+1}

min # nodes = $h+1$

empties = # nodes + 1
Always??

2 child root $e(T) = e(L) + e(R)$
by I.H. $= n(L) + 1 + n(R) + 1$
 $= n(T) + 1$

Complete binary tree

A complete tree of height h is

A root

or

Complete(h)

plus

Complete(h-1) Perfect(h-2)

Perfect(h-1) Complete(h-1)

Min/Max number of nodes in Complete(h)?

$$= 2^{h+1} - 1$$

$$\begin{aligned} S(h) &= S(h-1) + \frac{p(h-2) + 1}{1} \\ &= S(h-1) + 2^{h-1} - 1 + 1 \\ &= 2^{h-1} + 2^{h-2} + \dots + 2^0 + \underbrace{S(0)}_1 = 2^h \end{aligned}$$

Complete binary tree height

Height of the complete binary tree with n nodes.

$$H(1) = 0$$

$$H(2) = \dots = H(3) = 1$$

$$H(4) = \dots = H(7) = 2$$

$$H(\underbrace{2^h}_n) = \dots = H(\underbrace{2^{h+1}-1}_n) = h$$

$$\forall n \quad 2^h \leq n < 2^{h+1}, \quad H(n) = h$$

$$h \leq \lg n$$

$$h = \underline{\underline{\lfloor \lg n \rfloor}}$$

$$h > \log n - 1$$

Ordered binary tree ADT

Tree ADT

- ▶ insert
- ▶ remove
- ▶ traverse

```
template<class T>
class tree {
public:
    ...
private:
    struct Node {
        T data;
        Node * left;
        Node * right;
    };
    Node * root;
    ...
};
```

Traversals

postorder

cout << x->data;
← pre order

```

inOrder( Node * x ) {
    If ( x != null ) {
        inorder(x->left);
        inorder(x->right);
    }
}
  
```

In order: 2, 5, 7, 9, 10, 15, 17, 20, 30

preorder: 10, 5, 2, 9, 7, 15, 20, 17, 30

postorder: 2, 7, 9, 5, 17, 30, 20, 15, 10
